

1. (currently amended) A method for processing at a proxy server data transmitted between a server and a client that is operated by a user, wherein the proxy server communicates with the client and the server through a network, the method comprising:

5 receiving a set of parameters in a client message at the proxy server, wherein the set of parameters are configured by the user at the client;

storing the set of parameters at the proxy server, wherein the parameters comprise domain identifiers associated with indications of whether to block transmission of cookies associated with the domain identifiers;

receiving at the proxy server a response message from the server for the client;

10 detecting at the proxy server a cookie associated with the response message;

extracting from the response message a domain identifier associated with the server;

retrieving a the set of parameters, ~~wherein the parameters comprise domain identifiers associated with indications of whether to block transmission of cookies associated with the domain identifiers;~~ and

15 processing the cookie at the proxy server in accordance with the retrieved set of parameters and the extracted domain identifier.

2. (original) The method of claim 1 further comprising:

20 in response to a determination that the set of parameters contains the extracted domain identifier, blocking the cookie from transmission from the proxy server to the client;

caching the cookie at the proxy server; and

sending a modified response message to the client.

3. (original) The method of claim 1 further comprising:

25 in response to a determination that the set of parameters contains the extracted domain identifier, sending the response message along with its associated cookie to the client.

4. (cancelled)

30 5. (original) The method of claim 1 further comprising:

determining, prior to processing the cookie at the proxy server in accordance with the retrieved set of parameters and the extracted domain identifier, if the set of parameters contains an indication that the user has enabled cookie processing by the proxy server.

5 6. (original) The method of claim 1 further comprising:
managing multiple sets of parameters for the user at the proxy server, wherein each set of parameters is associated with an identifier; and

 selecting by the user a first identifier that is associated with the set of parameters prior to retrieving the set of parameters, wherein the set of parameters is retrieved in accordance with the
10 selected first identifier.

 7. (original) The method of claim 6 wherein the first identifier is selecting during an authentication operation.

15 8. (original) The method of claim 6 further comprising:
selecting a second identifier; and
processing the cookie at the proxy server in accordance with a set of parameters that is associated with the second identifier.

20 9. (original) The method of claim 6 wherein identifiers that are associated with sets of parameters are chosen from a group comprising a type of client device or a client location.

 10. (currently amended) An apparatus for processing at a proxy server data transmitted between a server and a client that is operated by a user, wherein the proxy server
25 communicates with the client and the server through a network, the apparatus comprising:
means for receiving a set of parameters in a client message at the proxy server, wherein the set of parameters are configured by the user at the client;
means for storing the set of parameters at the proxy server, wherein the parameters
comprise domain identifiers associated with indications of whether to block transmission of
30 cookies associated with the domain identifiers;

means for receiving at the proxy server a response message from the server for the client;
means for detecting at the proxy server a cookie associated with the response message;
means for extracting from the response message a domain identifier associated with the
server;

5 means for retrieving a the set of parameters, ~~wherein the parameters comprise domain
identifiers associated with indications of whether to block transmission of cookies associated
with the domain identifiers;~~ and

means for processing the cookie at the proxy server in accordance with the retrieved set
of parameters and the extracted domain identifier.

10

11. (original) The apparatus of claim 10 further comprising:

means for blocking the cookie from transmission from the proxy server to the client in
response to a determination that the set of parameters contains the extracted domain identifier;

means for caching the cookie at the proxy server; and

15 means for sending a modified response message to the client.

12. (original) The apparatus of claim 10 further comprising:

means for sending the response message along with its associated cookie to the client in
response to a determination that the set of parameters contains the extracted domain identifier.

20

13. (cancelled)

14. (original) The apparatus of claim 10 further comprising:

25 means for determining, prior to processing the cookie at the proxy server in accordance
with the retrieved set of parameters and the extracted domain identifier, if the set of parameters
contains an indication that the user has enabled cookie processing by the proxy server.

15. (original) The apparatus of claim 10 further comprising:

30 means for managing multiple sets of parameters for the user at the proxy server, wherein
each set of parameters is associated with an identifier; and

means for selecting by the user a first identifier that is associated with the set of parameters prior to retrieving the set of parameters, wherein the set of parameters is retrieved in accordance with the selected first identifier.

5 16. (original) The apparatus of claim 15 wherein the first identifier is selecting during an authentication operation.

 17. (original) The apparatus of claim 15 further comprising
 means for selecting a second identifier; and
10 means for processing the cookie at the proxy server in accordance with a set of
parameters that is associated with the second identifier.

 18. (original) The apparatus of claim 15 wherein identifiers that are associated with
sets of parameters are chosen from a group comprising a type of client device or a client location.
15

 19. (currently amended) A computer program product in a computer readable medium
for use at a proxy server for processing data transmitted between a server and a client that is
operated by a user, wherein the proxy server communicates with the client and the server through
a network, the computer program product comprising:

20 means for receiving a set of parameters in a client message at the proxy server, wherein
the set of parameters are configured by the user at the client;

means for storing the set of parameters at the proxy server, wherein the parameters
comprise domain identifiers associated with indications of whether to block transmission of
cookies associated with the domain identifiers;

25 means for receiving at the proxy server a response message from the server for the client;
 means for detecting at the proxy server a cookie associated with the response message;
 means for extracting from the response message a domain identifier associated with the
server;

means for retrieving a the set of parameters, ~~wherein the parameters comprise domain identifiers associated with indications of whether to block transmission of cookies associated with the domain identifiers;~~ and

5 means for processing the cookie at the proxy server in accordance with the retrieved set of parameters and the extracted domain identifier.

20. (original) The computer program product of claim 19 further comprising:

means for blocking the cookie from transmission from the proxy server to the client in response to a determination that the set of parameters contains the extracted domain identifier;

10 means for caching the cookie at the proxy server; and

means for sending a modified response message to the client.

21. (original) The computer program product of claim 19 further comprising:

15 means for sending the response message along with its associated cookie to the client in response to a determination that the set of parameters contains the extracted domain identifier.

22. (cancelled)

23. (original) The computer program product of claim 19 further comprising:

20 means for determining, prior to processing the cookie at the proxy server in accordance with the retrieved set of parameters and the extracted domain identifier, if the set of parameters contains an indication that the user has enabled cookie processing by the proxy server.

24. (original) The computer program product of claim 19 further comprising:

25 means for managing multiple sets of parameters for the user at the proxy server, wherein each set of parameters is associated with an identifier; and

means for selecting by the user a first identifier that is associated with the set of parameters prior to retrieving the set of parameters, wherein the set of parameters is retrieved in accordance with the selected first identifier.

30

25. (original) The computer program product of claim 24 wherein the first identifier is selecting during an authentication operation.

26. (original) The computer program product of claim 24 further comprising:
5 means for selecting a second identifier; and
means for processing the cookie at the proxy server in accordance with a set of
parameters that is associated with the second identifier.

27. (original) The computer program product of claim 24 wherein identifiers that are
10 associated with sets of parameters are chosen from a group comprising a type of client device or
a client location.
